IIB provides Russian transport infrastructure support: the Bank extends a large loan for the construction of the Central Ring Road

December 28, 2020

International Investment Bank issued a subordinated loan to support the construction of the Central Ring Road (CRR) in the Moscow Region of the Russian Federation.

As part of this large-scale infrastructure project, a new 106-kilometer long section of the Central Ring Road was built, connecting the M-11 Moscow - St. Petersburg and M-7 Volga highways. The estimated speed of vehicles on this modern high-speed four-lane highway is about 140 km/h.

The implementation of the project is aimed at modernization and development of the transport infrastructure of the Moscow Region, in particular, by increasing traffic capacity and average speed. Being one of the priority projects of the "Transport Strategy of the Russian Federation until 2030", the Central Ring Road is included in the national state federal target program "The Development of the Transport System".

The financing received from IIB will allow the project's current shareholders to redistribute existing capital investments and direct additional resources for further development, new initiatives and tackling priority issues.

Besides federal budget funds, the project is supported by private investors and large commercial financial institutions, as well as by two multilateral development banks - International Investment Bank and Eurasian Development Bank (EDB). The total cost of the whole CRR project is estimated at over 300 billion rubles.
